

VMS2000 Release Notes

Software Version: VMS2000 v2.86

Release Date: September 12, 2017

Products Affected: DVS1000, DVS2000, DVS2500

Description: VMS2000 is the Systems With Intelligence Video Management Software for client and server. The server software operates the Systems With Intelligence Digital Video Servers, (DVS), and the client software runs on a Windows based PC that connects to the DVS. The SWI cameras communicate with and can be managed by the Systems With Intelligence Video Management Software.

Version 2.86 adds the features and fixes listed in the tables below.

VMS2000 Server Software V2.86

Corrections	
C1	A database connection error that affected the VMS Client was fixed.
C2	Changing some configurations in the cameras was causing intermittent VMS Server crashes. This problem has been fixed.
C3	PTZ Preset analytics were not recovering after VMS Server restart. This problem has been fixed
C4	PTZ preset analytics were not working in 'reverse' sequence. This problem has been fixed
New Features	
N1	Individual thermal model selection for each preset on TCAM models. Users can now have different parameter profiles per preset (e.g. different emissivity values, different ambient temperature, etc.).

VMS Client Software V2.86

Corrections	
C1	Switching between Treeviews caused the video on some channels to stop. This problem has been fixed.
C2	A database connection error that affected the VMS Client was fixed.

New Features	
N1	Individual thermal model selection for each preset on TCAM models. Users can now have different parameter profiles per preset (e.g. different emissivity values, different ambient temperature, etc.)
N2	Configuration screen for analytics is bigger allowing better visualization of the area of interest.
Modifications	
M1	The menu for analytic scheduling has been revamped to make it more user friendly.
