

FOR IMMEDIATE RELEASE

Systems With Intelligence Partners with Italy's Tecnovideo

*Canadian-based world headquarters to be the
North American Repair and Integration Center for the Explosion Proof Camera Stations*

Mississauga, ON, Canada, December 7, 2023 - Systems With Intelligence Inc. (SWI), a leading provider of Touchless™ monitoring solutions for the electric utility, wind and oil & gas industries will be the official North American repair and integration centre for Tecnovideo's fixed and PTZ explosion proof camera stations.

The complete range of Tecnovideo's explosion-proof certified stainless steel (AISI316L) CCTV equipment and accessories will be available to be repaired at the SWI world headquarters in Mississauga, Ontario, just 20 minutes outside of Toronto.

SWI will execute product integration processes such as assembling thermal and visual cameras within Tecnovideo's enclosures while meeting North American industry standards and regulations.

"We are thrilled to be working with Tecnovideo as their North American partner," said Angelo Rizzo - President & CEO of Systems With Intelligence. "Our experience with Touchless™ monitoring solutions in remote locations compliments our expansion into the Oil & Gas sector where Tecnovideo explosion proof camera stations have an impressive reputation."

Prior to the partnership, North American Tecnovideo customers had to ship their camera stations complete with camera inside, to Tecnovideo's head office in Italy for repair. With each camera and camera station having dimensions of approximately 2ft across and weighing up to 75 lbs, the logistics, timing and cost of transportation were significant.

Now, overnight shipping within North America ensures the camera and case can arrive at SWI's repair center the same week for immediate diagnosis or integration.

"Our dedicated team of engineers have spent two intense weeks being trained by the experts at Tecnovideo's head office." said Angelo Rizzo "The camera stations are sealed so the care and detail needed to diagnose each item sent in for repair is quite intense."

"Providing local service and assembly further solidifies our commitment to the North American market. This step not only enhances accessibility but also reinforces our dedication to serving our North American partners with tailored solutions and efficient support" commented Enrico Dani, Tecnovideo's Director of Sales and Marketing.

All Tecnovideo's explosion proof products are suitable for installation in extreme environments such as oil & gas plants, refineries onshore, storage tanks, FPSO/FSO vessels, LNG carriers, offshore platforms, perimeter protection, and nighttime surveillance.

SWI will start repair and integration operations in December 2023.

Quick Facts

- Systems With Intelligence is a Canadian company, founded in 2009
- Systems With Intelligence Touchless™ monitoring systems are installed in over 100 utilities worldwide
- Systems With Intelligence senior management team has over 100 years of collective experience in utility asset monitoring and communications technologies

About Systems With Intelligence

Systems With Intelligence Inc. is a global provider of Touchless™ monitoring solutions for electric utility applications. SWI systems collect and analyze the data that allows utilities to increase safety and reliability while reducing operating costs. Coupling thermal monitoring and visual imaging technology with advanced analytic algorithms, Systems With Intelligence solutions automate remote site monitoring.

Systems With Intelligence products are engineered to operate in the harshest environments, and withstand high levels of electromagnetic interference, static discharge and voltage surges found in industrial applications to ensure uninterrupted operation. Providing a monitoring system that operates reliably and connects seamlessly allows customers to remain focused on their operations.

The Systems With Intelligence management and technical teams are comprised of professionals with extensive experience in advanced technology for mission critical applications in harsh environments. With domain expertise in substation and industrial automation, communications, and utility operations our team is uniquely positioned to deliver effective and intelligent monitoring solutions.
