

Systems With Intelligence Inc. Launches Flexible DVS3000 Digital Video Server for Remote Substation Monitoring Applications

Mississauga, ON, Canada, May 6, 2024 – **Systems With Intelligence Inc.**, a global leader in providing intelligent, Touchless™ Monitoring Solutions for electric utility, industrial, and oil & gas applications, today announced the launch of the DVS3000 Substation Hardened Digital Video Server.

The DVS3000 offers users the ability to upgrade both the storage drive and power supply directly in the field, eliminating costly and time-consuming factory repairs.

It is also equipped with a more advanced processor than previous models, ensuring a seamless integration with the future generation of operating systems.

“The DVS3000 is the centerpiece of a continuous substation monitoring solution,” explained Angel Rizzo, President & Chief Executive Officer at Systems With Intelligence. “By empowering users with on-site customization and scalability, the DVS3000 is a smart, long-term investment for electric utilities.”

Specifically engineered to IEC 61850-3 and IEEE1613 standards for operation in harsh substation environments, the DVS3000 can withstand the presence of high levels of electromagnetic interference, voltage fluctuations, and wide temperature ranges.

The powerful platform records and analyzes data from multiple thermal and visual sensors. Real-time alarms and event notifications automatically alert the Operations & Maintenance team to potential faults, making it the ideal solution for applications with remote sites that are managed from a central location.

“Touchless™ Monitoring solutions allow utilities to shift away from expensive time-based physical inspections and transition toward a Condition-Based Maintenance strategy,” continued Rizzo. “The introduction of the DVS3000 builds on our ability to help utilities reduce maintenance costs, improve reliability, and enhance safety.”

The DVS3000 Substation Hardened Digital Video Server is available immediately for order from Systems With Intelligence.

About Systems With Intelligence Inc.

Systems With Intelligence Inc. (SWI) is a global provider of Touchless™ Monitoring Solutions for electric utility applications. SWI systems collect and analyze the data that allows utilities to increase safety and reliability while reducing operating costs. Coupling thermal monitoring and visual imaging technology with advanced analytic algorithms, SWI solutions automate remote site monitoring.

Systems With Intelligence products are engineered to operate in the harshest environments, and withstand high levels of electromagnetic interference, static discharge and voltage surges found in industrial applications, to ensure uninterrupted operation. Providing a monitoring system that operates reliably and connects seamlessly allows customers to remain focused on their operations.
