

TOUCHLESS™ MONITORING SOLUTIONS

IPCAM2000S SUBSTATION CAMERA

The IPCAM2000S by Systems With Intelligence is a substation-grade network camera designed specifically for extreme and challenging environments, such as utility substations. Engineered to withstand severe weather and operational stresses, this camera ensures reliable video monitoring under demanding conditions.

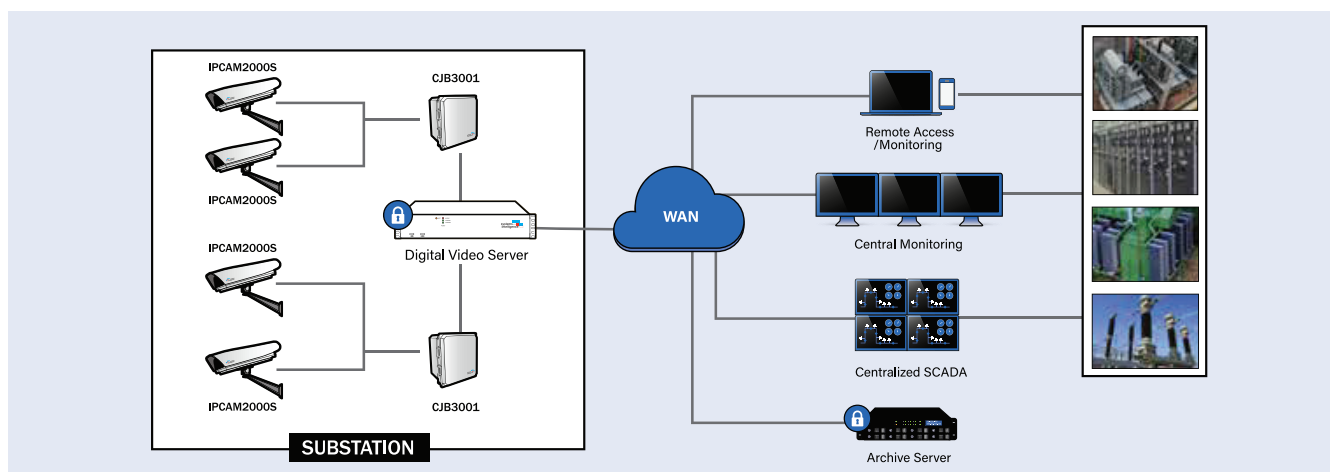

KEY FEATURES:

- **Substation Ready:** Built to IEC61850-3 standards, capable of operating between -40°C to +85°C.
- **High Definition Imaging:** 1080p resolution for clear, day-and-night vision.
- **Durable Build:** IP66-rated for water and dust resistance, with a robust aluminum housing.
- **Advanced Connectivity:** Fiber optic network option for interference free data transmission.
- **Smart Analytics:** Integrated event detection and motion analysis to enhance security.

TOP BENEFITS:

- **Reliable Performance:** Consistently operates in extreme temperatures and environmental conditions.
- **Comprehensive Monitoring:** Equipped with infrared illuminators for low-light visibility.
- **Optimized for Remote Locations:** Configurable to manage bandwidth effectively, ensuring efficient monitoring from a distance.
- **Resilience Against Interference:** Designed to resist electromagnetic interference (EMI) and power disruptions.

The IPCAM2000S is a dependable solution for utilities requiring high-quality, automated video monitoring and asset protection in remote or industrial settings.
