

FOR IMMEDIATE RELEASE

Systems With Intelligence Launches New Website and Online Resource Center for Critical Infrastructure Teams

Mississauga, ON - June 23, 2026 - Systems With Intelligence (SWI), a global leader in utility-grade Touchless™ Monitoring solutions, today announced the launch of its newly redesigned website and expanded online resource center, giving engineers and operations teams a single destination for the technical documentation, white papers, datasheets, and case studies that guide critical monitoring decisions.

The redesigned site brings SWI's full library of technical resources together in one place and adds a registered-access resource center built for the people who specify, integrate, and operate monitoring systems. Once registered, users gain access to in-depth technical documentation, the latest white papers, product datasheets and guides, application notes, case studies, webinars, and software release notes, along with an interactive 3D Touchless™ Monitoring tour that walks visitors through working industrial sites.

“Our customers make high-stakes decisions about assets they cannot afford to lose, and they need accurate technical information at the moment they need it,” said Angelo Rizzo, President and CEO of Systems With Intelligence. “The new website and resource center give engineers and operations teams direct access to the documentation, datasheets, and white papers that inform those decisions, and the interactive 3D tour lets them experience Touchless™ monitoring in a real industrial environments before a single sensor is installed.”

The centerpiece of the new resource center is an interactive 3D Touchless™ Monitoring tour. Visitors can step inside a remote site equipped with SWI solutions, compare the challenges of manual monitoring against the visibility that Touchless™ monitoring provides, explore how remote critical assets and overall site security are monitored in real time, and review typical monitoring architectures used across utility and industrial environments. The experience is designed to make the value of continuous, utility-grade monitoring clear to teams that are evaluating it for the first time.

By gathering technical resources behind a single registration, SWI gives reliability engineers, integrators, and operations leaders a faster path to the information they rely on, while keeping that information current as products, software, and field guidance evolve.

Resource Center Highlights

- **Centralized technical library:** White papers, datasheets, application notes, guides, and case studies gathered in one searchable location
- **Registered access:** A simple sign-up gives engineers and operations teams direct access to in-depth technical documentation and the latest product releases
- **Interactive 3D tour:** A guided walk-through of an industrial site equipped with Touchless™ monitoring, from manual monitoring challenges through typical system architectures
- **Built for decision-makers:** Resources organized for the people who specify, integrate, and operate monitoring systems
- **Always current:** Software release notes, webinars, and new white papers added as they become available

The new website and resource center are available now at systemswithintelligence.com. Engineers, operations leaders, and reliability teams can register for the resource center at systemswithintelligence.com/resources/sign-up to access technical documentation, white papers, datasheets, and the interactive 3D Touchless™ Monitoring tour.

Quick Facts

- Systems With Intelligence was founded in 2009
- Systems With Intelligence Touchless™ monitoring systems are installed with over 900 customers worldwide
- Systems With Intelligence's senior management team has over 100 years of collective experience in utility asset monitoring and communications technologies

About Systems With Intelligence Inc.

Systems With Intelligence Inc. (SWI) is a global provider of Touchless™ Monitoring Solutions for electric power, industrial, and oil & gas applications. SWI systems collect and analyze the data that allows companies to increase safety and reliability while reducing operating costs. Coupling advanced sensor technology with advanced AI analytic algorithms, SWI solutions automate remote site monitoring and inspections.

Systems With Intelligence products are engineered to operate in the harshest environments and withstand high levels of electromagnetic interference, static discharge, and voltage surges found in industrial applications, ensuring uninterrupted operation. Providing a monitoring system that operates reliably and connects seamlessly allows customers to remain focused on their operations.
