Systems With Intelligence Completes SOC 2 Type 1 Audit, Reinforcing Commitment to Data Security

Mississauga, ON – July 27, 2026 - Systems With Intelligence (SWI), a provider of Touchless™ Monitoring Solutions for utilities, power grid operators, and industrial reliability professionals, today announced the successful completion of its [SOC 2 Type 1 audit](#), conducted by Thoropass.

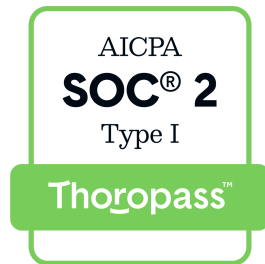

The independent audit confirms that SWI's data-handling practices meet recognized security standards, giving customers assurance that their intellectual property and sensitive data remain isolated and encrypted. Third-party vendors are a common target for cyberattacks, and the audit provides SWI customers with documented proof that SWI is not a weak point in their supply chain, reducing their exposure to the financial and reputational fallout of a vendor-related breach.

"Our customers trust us to monitor assets that are critical to their operations, and that trust has to extend to how we handle their data," said Angelo Rizzo, President and CEO of Systems With Intelligence. "This audit is independent confirmation that our security practices meet the standard our customers expect."

The certification also simplifies procurement for SWI customers. Rather than completing lengthy security questionnaires or coordinating separate audits of SWI's systems, customers' IT and legal teams can rely directly on the independent report, often shortening approval timelines from months to days. For customers who are themselves subject to compliance requirements, working with a SOC 2-certified vendor can also support their own regulatory obligations.

"For our customers, this also means less friction," Rizzo added. "Their teams can skip redundant security reviews and move forward with confidence, knowing the work has already been done."

The audit's review of SWI's availability practices confirms the company maintains disaster recovery safeguards designed to prevent disruption to customers' daily monitoring operations. Its review of processing integrity confirms that the data, reports, and analytics generated by SWI's software are accurate and have not been altered.

Quick Facts

- Systems With Intelligence was founded in 2009
- Systems With Intelligence Touchless™ monitoring systems are installed with over 900 customers worldwide
- Systems With Intelligence's senior management team has over 100 years of collective experience in utility asset monitoring and communications technologies

About Systems With Intelligence Inc.

Systems With Intelligence Inc. (SWI) is a global provider of Touchless™ Monitoring Solutions for electric power, industrial, and oil & gas applications. SWI systems collect and analyze data, enabling companies to increase safety and reliability while reducing operating costs. Coupling advanced sensor technology with advanced AI analytic algorithms, SWI solutions automate remote site monitoring and inspections.

Systems With Intelligence products are engineered to operate in the harshest environments and withstand high levels of electromagnetic interference, static discharge, and voltage surges found in industrial applications, ensuring uninterrupted operation. Providing a monitoring system that operates reliably and connects seamlessly allows customers to remain focused on their operations.
